## Solid-state Repeat Cycle Timer

## 1/16 DIN Solid-state Repeat Cycle

## Timer

- Wide power supply ranges of 100 to 240 VAC 24 VAC/VDC, 12VDC
- Combinations of independent long or short ON/OFF time settings are possible

■ Fourteen time ranges from 0.05 s to 30 h or 1.2 s to 300 h

- Repeat cycle models with either ON start or OFF start operating functions
- Easy sequence checks through
 instantaneous outputs for a zero set value at any time range
- 11-pin and 8-pin models are available

| Service life | Mechanical | 20 million operations min. (under no load at 1,800 operations/h) |  |  |  |
|  | Electrical | 100,000 operations min. (5 A at 250 VAC , resistive load at 1,800 operations/h) |  |  |  |
| Insulation resistance |  | $100 \mathrm{M} \Omega$ min. (at 500 VDC ) |  |  |  |

Note: A power supply with a ripple of $20 \%$ max. (single-phase power supply with full-wave rectification) can be used with each DC model.

## Engineering Data

Note: A maximum current of 0.15 A can be switched at 125 VDC $(\operatorname{cosf}=1)$ and a maximum current of 0.1 A can be switched if $\mathrm{L} / \mathrm{R}$ is 7 ms . In both cases, a life of 100,000 operations can be expected.
The minimum applicable load is 10 mA at 5 VDC (failure level: P ).

PROTECTIVE COVER
Y92A-48B

The hard plastic protective cover prevents accidental resetting. It also shields the front panel from dirt and water. The cover is intended for use in areas where unusual service conditions do not exist. The Y92A-48B cover cannot be used with the Y92P Panel Covers below.

## Installation

INPUT CONNECTIONS
(H3CR-F $\square$

The neutral or common of the power supply is connected to terminal 2. Terminal 7 of H3CR-F 8-pin terminals and terminal 10 of H3CR-F 11-pin terminals should be connected to the "hot" or positive of the power supply.

## OUTPUT CONNECTIONS

 (H3CR-F $\square$ $\square$ -$\square \square$ )Design your control circuit using the relay contacts to switch the load. Never switch a load with the contact that is being used as an input signal. The timer's circuitry may be damaged.

## SELECTING TIME RANGES

A time range ( 0 to 1.2, 0 to 3,0 to 12 , or 0 to 30 ) is selected for ON and OFF-time using the time range selector at the lower left corner of the front panel, and the selected time range appears within the plastic frame of the time setting knob (= scale range display windows).
For ON-time, the desired time unit (sec, 10 s , min, and hrs, or 10 s , 10 min , hrs, and 10 h ) is indicated in the ON-time unit display window at the lower right corner of the front panel and can be changed by turning the ON-time unit selector located below the ON-time unit display window.
For OFF-time, the desired time unit ( $\mathrm{sec}, 10 \mathrm{~s}$, min, and hrs, or 10 s , 10 min , hrs, and 10 h ) is indicated in the OFF-time unit display window at the upper right corner of the front panel and can be changed by turning the OFF-time unit selector located below the OFF-time unit display window.

## TRACK MOUNTING

Using P2CF- $\square \square$ Socket

## Mounting

The P2CF- $\square \square$ socket has two hooks that secure the time to the socket. Be sure to allow at least 20 mm ( 0.79 in ) clearance above and below the socket to gain access to release the hooks for servicing and maintenance. Then clip rear of the socket to the track. Push the bottom onto the track until the latch hooks securely.

## Removal

Pull the latch on the socket with a flat-blade screwdriver and remove the timer and socket as one unit.

## Using Y92F-73 and Y92F-74 Adapters

Install the H3CR-H timer, face first, into the back side of the Y92F-73 or Y92F-74 adapter so the bezel fits snuggly. Be sure the retaining clips at the back of the adapter fit into the slots on either side of the timer. Compress the top and bottom tabs of the adapter then push the adapter through the front side of the panel cutout. Be sure the tabs extend after the installation for a secure fit.

To remove the timer from the adapter, unclip the two retaining clips at the back of the adapter. To remove the adapter and timer from the panel as a unit, compress the tabs behind the panel and push the unit out the front of the panel.

## Precautions

To avoid malfunction or damage, do not change the time unit or time range while the timer is in operation. Be sure to turn off the power supply to the timer before changing any of the selections.
